Epidemic Probably Not Spanish in Origin-Germ Still Unknown-Pecple Should Guard Against "Droplet Infection"-Surgeon General Blue Makes Authoritative Statement.

Washington, D. C .- (Special.) -Although King Alfonso of Spain was one of the victims of the influenza epidemic in 1893 and again this summer, Spanish authorities repudiate any claim to foffuenza as a "Spanish" disease. If the people of this country do not take care the epidemic will become so widespread throughout the United States that soon we shall hear the disease called "American" influenza.

In response to a request for definite information concerning Spanish influenza, Surgeon General Rupert Blue of the U. S. Public Health Service has

What is Spanish Influenza? Is it something new? Does it come from

"The disease now occurring in this of 'cold,' accompanied by fever, pains

in the head, eyes, cars, back or other parts of the body and a feeling of severe sickness. In most of the cases the symptoms disappear after three or four days, the patient then rapidly recoverdevelop pneumosis, or inflammation of the ear, or meningitis, and many of this so-enfled 'Spanish' influenza is identical with the epidemics of influen-What is the matter with our zn of earlier years is not yet known.

"Epidemics of influenza have visited this country since 1647. It is interesting to know that this first epidemic was brought here from Valencia, Spain, Since that time there have ease. In 1889 and 1890 an epidemie of influenza, starting somewhere in the Both times the epidemic spread wide Army and Jewish Welfare Board; ly over the United States.

"Although the present epidemic is called 'Spanish Influenza,' there is no reason to believe that it originated in came from the Orient and they call attention to the fact that the Germans for the campaign. The amount of mention the disease as occurring along the eastern front in the summer and funds needed to meet the requirements fall of 1917."

How can "Spanish Influenza" be recognized?

to the outbrenks of ordinary coughs and colds, which usually occur in the cold months, epidemics of influenza Thus the present epidemic raged most intensely in Europe in May, June and July. Moreover, in the case of ordipary colds, the general symptoms onset as they are in influenza. Finally, ordinary colds do not spread through the community so rapidly or so extensively as does influenza.

tients complain of feeling chilly, and with this comes a fever in which the temperature rises to 100 to 104. In (Continued next week.)
